EDUCATION

University of Maryland, College Park

Ph.D. in Computer Science – supervised by Prof. Ming C. Lin

Maryland, USA

Sep 2025 - Now

University of Information Technology - Vietnam National University

B.Sc. in Computer Science

Ho Chi Minh, Vietnam

Nov 2020 – Aug 2023

High School for the Gifted - Vietnam National University

Specialized in Physics

Ho Chi Minh, Vietnam

Sep 2017 – July 2020

RESEARCH INTERESTS

My research focuses on Computer Vision, particularly on leveraging Vision-Language Models to achieve a comprehensive understanding of 2D and 3D environments without vocabulary constraints. I am also dedicated to integrating Multimodal Large Language Models to enable more interactive and intuitive communication between humans and machines. My work involves developing algorithms that extract both geometric and semantic information from real-world settings, with applications in robotics, autonomous driving, and augmented reality.

EXPERIENCE

University of Maryland, College Park – GAMMA Lab

PhD Student – Supervised by Prof. Ming C. Lin

Maryland, USA

Sep 2025 – Now

- Research Project: Open-World Visual Odometry
 - * Developing a temporal, spatial and camera aware visual odometry system estimating real-world-scale ego-motion from any monocular dashcam footage captured by any camera. One paper accepted to the CVPR'26, marking my first paper as a PhD student!
- Research Project: High-Definition Map 3D Reconstruction
 - * Prior works estimate only local perspectives from local observations. Can a reliable ego-trajectory (OpenVO) serve as a backbone to fuse these local views into a globally consistent HD Map? Given the strong priors encoded in modern foundation models, do we still need end-to-end retraining for driving reconstruction? Project is ongoing.
- Graduate Research Project: Real2Sim2Real 3D Reconstruction and Generation
 - * Given a video of a rigid environment, can we recover an accurate 3D reconstruction and semantic understanding of the scene? And beyond that, is it possible to extract high-granularity 3D geometry and texture for every object and subsequently leverage them for scalable 3D generation? Project is ongoing.

SpreeAI

AI Research Engineer – In close collaboration with Dr. Aayush Bansal and Dr. Minh Vo

California, USA

Nov 2024 – Sep 2025

- Research Project: Multimodal representations for physically-grounded Multimodal-LLM.
 - * How can we determine whether a multimodal LLM's grounding is truly reliable, given that even humans often do not know what they do not know? Can a model assess whether it understands or is hallucinating? We address this through an Active Continual Learning framework with human-in-the-loop feedback, where the model actively selects the most informative data and learns incrementally rather than retraining from scratch. One internal system delivered.

VinAI Research – Qualcomm

AI Research Resident – Supervised by Dr. Anh Tran and Prof. Cuong Pham

Hanoi, Vietnam

Feb 2023 – Nov 2024

- Research Project: Open-Vocabulary 3D Instance Segmentation
 - * Developing an algorithm for tackling the open-vocabulary 3D point cloud instance segmentation by using 2D prior, achieves state-of-the-art results on five different dataset benchmarks. One paper accepted to the CVPR'24, winning two workshop challenges ICCV'23, and CVPR'24.
- Research Project: Class-agnostic 3D Instance Segmentation
 - * Developing an algorithm for high-quality class-agnostic 3D instance segmentation by leveraging a tracking foundation model and an optimization-based mask aggregation approach. One paper accepted to the CVPR'25.

- Research Project: Vocabulary-Free 3D Point Cloud Understanding
 - * Introducing a new benchmark and algorithms for open-ended 3D point cloud instance segmentation, leveraging Large-Language Models to establish several baselines. One paper accepted to the ICCV'25.
- Applied R. Project: Vietnam Geographic Map Understanding – *Advised by Prof. Minh Hoai*
 - * VinAI Research collaborates with the Ministry of Information and Communications on a project utilizing computer vision to identify counterfeit Vietnam geographic maps online, facilitated by the introduction of the extensive VinMap dataset. One paper accepted to the Vietnam local conference.

University of Information Technology – Vietnam National University Ho Chi Minh, Vietnam

Research BS Student

Nov 2020 – Aug 2023

- Graduate Thesis: Hybrid-Anchor Rotation Detector for Oriented Object Detection (9.8/10.0)
 - * Developing a hybrid model for Oriented Object Detection achieves state-of-the-art performance with the least training resource on three dataset benchmarks. Best thesis award - one paper accepted to ICCV'25.
- Research Project: Aerial Oriented Object Detection
 - * Investigating Oriented Object Detection in Aerial Images. Algorithms implementations and dataset development for adverse weather conditions. Four papers accepted at the local conferences/journals.
- Research Project: Page Object Detection
 - * Evaluating the new YOLO design on two dataset benchmarks of page object detection. One paper accepted at the local conferences.

AWARDS & ACHIEVEMENTS

UMD Dean’ Fellowship: Awarded to candidates with exceptional academic records. (2025–2027)
First Prize CVPR Workshop: VinAI-3DIS ranked top-1 in OpenSUN3D CVPR workshop. (2024)
Second Prize ICCV Workshop: VinAI-3DIS ranked top-2 in OpenSUN3D ICCV workshop. (2023)
Best Thesis Award: Awarded to thesis with the highest grade. (2023)
Third Prize UIT AI Challenge: The team ranked top-3 in Scene Text recognition challenge. (2023)
Second Prize UCPC: Ranked top-2 in UIT Collegiate Programming Contest. (2022)
Expert Codeforces: Reaching Expert title on Codeforces – Competitive Programming platform. (2022)
First Prize UIT-AlgoBootcamp: Winning Competitive Programming Competition at UIT. (2021)
Outstanding Student Scholarship: Awarded to students with the best academic performance. (2021)
Outstanding Student in Physics: Awarded to students with the highest GPA in Physics. (2020)
